

Instructions For Fitting MGB Air Intake Guard

1. *Carefully* pry grill from car, causing fasteners to strip off pegs.
2. Clean recess, then simply place grill guard and grill into position.

Note: replacing fasteners is not necessary for retaining the grill, and makes removal for waxing much simpler. However, if you want a more permanent installation, apply small dabs of clear silicone caulk to the pegs on the grill and install. After caulk cures, grill is held firm, yet can be removed with an adequate pull.
