

•MGA Door Panel Edging•

This edge trim adds the finishing touch to your MGA door panels!

Not only does it look great, it protects the edges around your door panel "glovebox" from wear and damage. Also, if the vinyl has detached from your panel around the glovebox opening, this trim will put it back in place permanently.

Made of black, textured vinyl with segmented metal core for gripping. Installs in seconds!

Instructions for Installation:

1. Use a fresh razor blade to square-up one end of the trim. If you run into metal, simply try again 1/16" farther along until you achieve a clean cut.
2. Press trim into place around your door pocket and mark with chalk the correct length for your car. Peel back a few inches of the trim and cut again with the razor.

Note: If you cut a little short, trim is elastic and may be stretched slightly.
