

MGA Mesh Grille Installation Instructions

For all MKI MGA Grilles

Note: This kit fits all slatted MKI MGA Grilles, whether original or aftermarket.

1. **Remove the grille assembly** from your car, and place it on a towel for disassembly.
2. **Remove the old slat assembly** by removing the MG badge, and the four other fastening points.
3. **Place the new mesh insert** into position as shown.
Note the 4 marked openings on the mesh that correspond with fastening points.

4. **Place the custom brackets** on top of the mesh as shown, and use your fasteners to secure. Evaluate how well the mesh follows the curvature of your grille. The mesh is pre-formed, but can be carefully bent for more or less curvature to match your specific grille.

5. **Carefully reinstall the grille** assembly to your car, and bolt in place with the hardware provided. MGAs vary considerably from car to car, and so these brackets are designed with generous slots and bendable arms to make possible a good fit to your car. If you need to bend the arms, be careful to use proper tools and support. Do not just bend with your hands and/or allow the soft brass grille shell to receive the stress of bending the arms of the brackets.
